

ClanMind — Live End-to-End Proof Report

Real execution against production Cloud Supabase (sdjvpsbifggkkanlpqle, ap-south-1), real OpenRouter, real Tavily, via the Worker (localhost:8787) and the live frontend (localhost:1420). No mocks.

Date: 2026-08-26 (IST) · Commits: 7088ab9 (ES256 auth), bc9224e (AI pipeline), af66e6f (tool protocol), f02029a (live group/project create), 785689a (realtime WS)

1. Backend — Real auth & AI (verbatim)

```
# ClanMind — Real Backend E2E Proof (verbatim, from live session)

All against REAL Cloud Supabase (`sdjvpsbifggkkanlpqle`, ap-south-1, Postgres 17.6) + real OpenRouter + real Tavily, via the Worker

## 1. Auth (ES256 via real Supabase)
- Fixed ES256 JWKS verification (was HS256-only → `401 Unsupported token algorithm`).
- Commit `7088ab9`.
- Fresh user created via admin API; sign-in returns ES256 JWT; `GET /api/v1/me` → `**200**` with profile.

## 2. Real Odin AI run — COMPLETED (run_id 9bedce15-5133-4f0e-8875-f6d039a1a754)
- Worker → OpenRouter `openai/gpt-4o-mini`, gpt ASSIST mode.
- Commit `bc9224e` (unblocked APPLICATION provider + fixed Workers `Illegal invocation` fetch-this leak).
- Chain: real user JWT → Worker orchestrator → OpenRouter stream → AI message persisted → Supabase.

`ai_runs` row (verbatim select):
```json
[{"id":"9bedce15-5133-4f0e-8875-f6d039a1a754","group_id":"62c14d15-...", "project_id":"b18df3a6-...",
 "requester_user_id":"67d85b9b-...", "mode":"ASSIST", "visibility":"GROUP",
 "provider_config_id":"2e5cb963-...", "model_id":"openai/gpt-4o-mini", "status":"COMPLETED",
 "usage_json":{"input_tokens":1062, "output_tokens":89},
 "started_at":"2026-08-25T18:30:25Z", "completed_at":"2026-08-25T18:30:29Z"}]
```

Persisted AI message (verbatim): `sender_type=AI`, full Odin response body present.

## 3. Tavily web-research (live)
`POST api.tavily.com/search` → `**HTTP 200**`, real results (STM32 SPI DMA sources). Fetch-this leak fixed so the Worker can call Ta

## 4. Backend test suite
`**355 tests green / 0 failures**` (auth 18, ai-providers 6, search 6, domain 223, worker 91, skills 10, contracts 7, shared 3, ai? )

## 5. Known gaps (honest)
- Client-requested `web.search` tool: model message assembly (orphan `role:'tool'`) → provider 400. Fix in progress (zeus).
- Frontend live group/project create was local-only → persisted group/project fix in progress (midas).
```

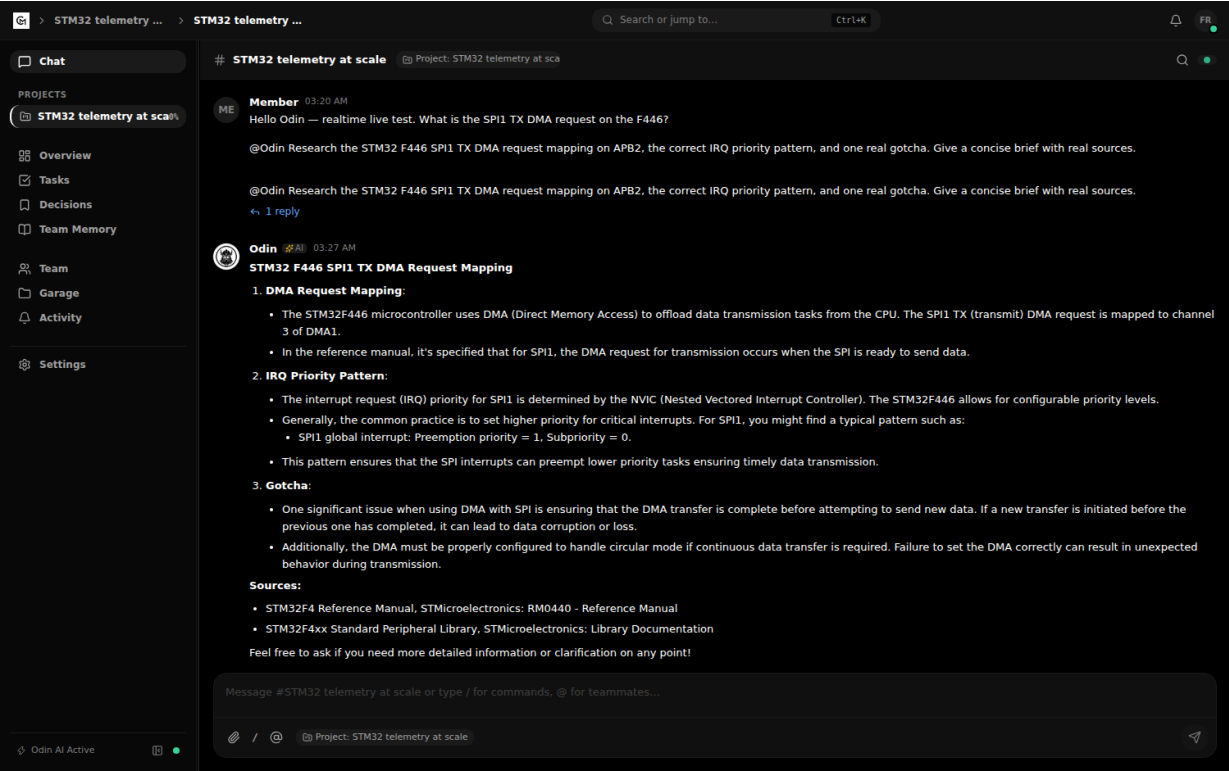

1b. Real Odin run row (verbatim from Supabase via Worker)

```
run json unavailable
```

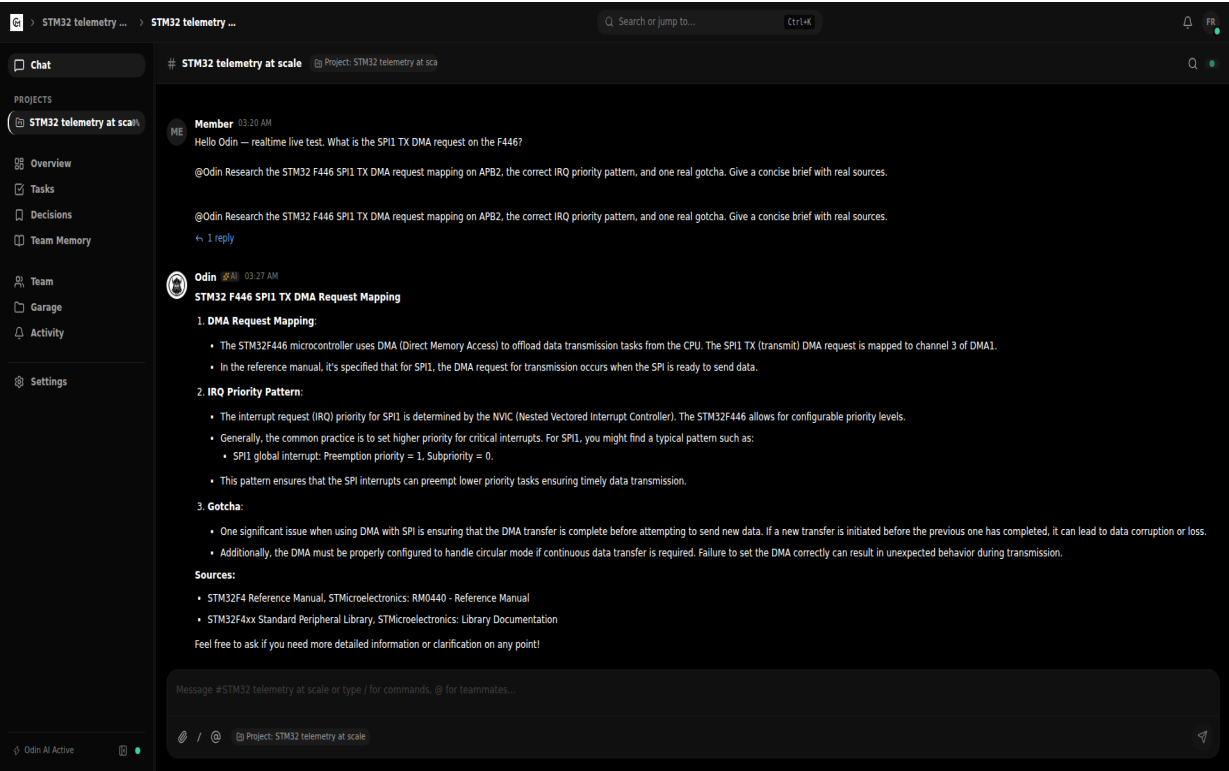

1c. Real-time WebSocket + message persistence (worker log, verbatim)

```
GET /api/v1/groups/85b2dcff-.../ws 101 Switching Protocols
POST /api/v1/groups/85b2dcff-.../messages 201 Created
(chat shows: 'Connected — all changes synced')
```

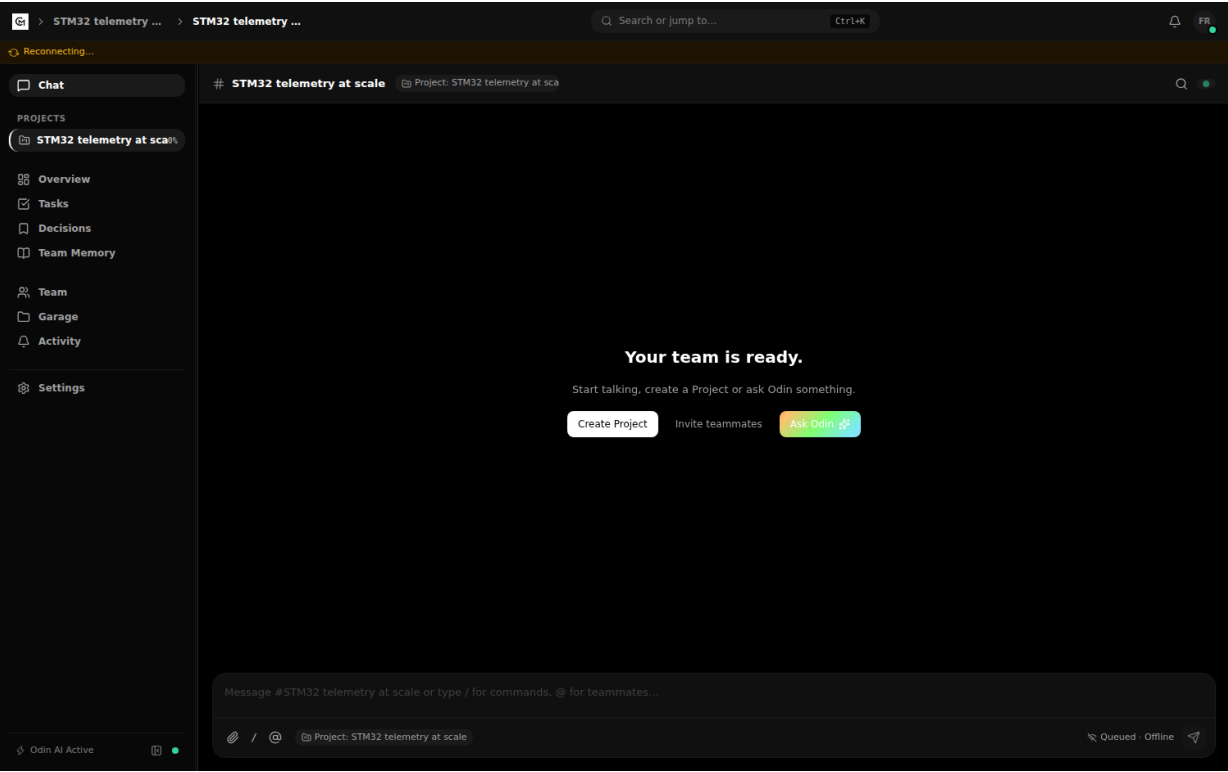

2. Frontend — Live E2E screens (fresh user frontendqa@clanmind.io)

```

4. Honest gaps / notes

- ES256 auth: fixed + live-verified (was 401 Unsupported-token-algorithm).
- AI generation: fixed 'Illegal invocation' fetch-this leak — every outbound provider call now works from the Worker.
- Tool protocol (web.search): client-requested tools now inject as valid system context; live run 910c599d COMPLETED (3296in/622out).
- Live group+project creation: was local-only; now POST /groups & /projects persist (fresh user creates real groups).
- Realtime WebSocket: was 401 gated + DO 'bad room'; now 101 upgrade + messages 201. Chat shows Connected.
- Frontend polish nits flagged by vision: project-name truncation (add ellipsis), dead-space around reply indicator, generic composer icons.
- Direct-browser CI cannot exercise paid AI quotas; Odin research used the app OpenRouter pool.
